Hiring Manager
cognizant

Dear Hiring Manager,

I am writing to express my interest in the Cloud Engineer position at Wipro. With hands-on experience across multiple cloud platforms—including AWS, Azure, GCP, Oracle Cloud, and IBM Cloud—I bring a versatile and solution-driven mindset to cloud infrastructure development, automation, and optimization.

As a DevOps Engineer at CorpAcademia and Itechnovations, I have designed and maintained scalable, secure, and high-performing cloud environments. My role involved provisioning cloud resources using Terraform and CloudFormation, developing CI/CD pipelines, and building full-stack cloud applications that support automated lab environments. I am especially proud of projects such as real-time multi-cloud lab automation and the migration of legacy systems to a microservices architecture using Kubernetes.

My technical foundation includes a deep understanding of Linux, networking, scripting (Python, Bash), and containerization technologies. I've consistently applied these skills to enhance cloud governance, streamline deployments, and drive cost-efficiency across platforms.

Beyond technical expertise, I bring strong communication, problem-solving, and team collaboration skills—qualities that I believe are just as vital for delivering impactful solutions in fast-paced cloud environments.

I would welcome the opportunity to contribute to cognizant cloud initiatives and would be thrilled to bring my multi-cloud experience and automation-first mindset to your team. Thank you for considering my application. I look forward to the opportunity to discuss how I can support your goals.

Sincerely,

Gokulnath V
